PROFILE INFO

I am a B.Tech Computer Science Engineering student (2022–2026) with a strong foundation in C programming and front-end web development using HTML and CSS. I enjoy building beginner-friendly projects that focus on clean structure, responsive design, and accessibility. Currently, I am curating a professional portfolio with GitHub integration and live demos to showcase my growth as a developer. My goal is to strengthen my skills, contribute to real-world projects, and prepare for future opportunities in web development and software engineering.
